Two more areas scheduled for mosquito control spraying

Thirty five mosquito collections positive for West Nile since July 9

Dallas – An area in Lake Highlands and another area northeast of White Rock Lake are scheduled for mosquito control spraying on Wednesday night into Thursday morning. Mosquitoes infected with West Nile virus were found in each area.

Weather permitting; the areas delineated below are scheduled for mosquito control spraying beginning at 10 p.m. Wednesday, September 9, 2009 and concluding at 3 a.m. Thursday, September 10, 2009.

Control Area 1: Lake Highlands: The area to be sprayed is within an area bounded by the DART Blue Rail Line, Walnut Hill Lane, Ferndale Road, Audelia Road, and Royal Lane back to the DART Rail Line.

Control Area 2: Northeast Dallas: This area is within an area bounded by the Kansas City Southern Rail Line, Buckner Boulevard, Oates Drive, Casa Oaks Drive, San Medina, and Easton Road back to the rail line.

While the insecticide is considered safe, residents in the above areas should avoid contact with the spray by staying indoors. Persons inside a vehicle while trucks are actively spraying should remain in their vehicles with the windows up and the air conditioner on until the trucks pass and the spray is no longer visible. Persons out during the scheduled spraying time should be alert for trucks and should not follow them. Residents who come in contact with the spray are advised to wash the affected area thoroughly with soap and water. The spray breaks down quickly in the presence of sunlight and has no residual effect. Fish ponds should be protected and pets should be brought inside during the spraying period.

Protection against mosquito bites

Dallas residents are urged to take precautions against mosquito bites by reducing outdoor activity during evening and nighttime hours. Residents who are outside during these times should cover their arms and legs and use a mosquito repellent.

Prevent mosquito breeding

Residents should eliminate standing water to prevent mosquito breeding and the spread of West Nile Virus. Breeding places for mosquitoes include swimming pools that are not kept clean, stagnant ponds, pet watering dishes, birdbaths, potted plants, old tires, empty containers, toys and clogged rain gutters & French drains. Standing water should be eliminated promptly, as mosquitoes can grow from egg to adult in as little as seven days.

To report standing water or mosquito problems Dallas residents should call 3-1-1. For additional information on Mosquito Control, visit www.dallascityhall.com.
