WHAT IS SYNTHETIC TURF?

Synthetic Turf is an artificial turf surface prepared of synthetic fibers made to look like natural grass. It is most often used in areas for sports that were originally or are normally played on natural grass. The average lifetime expectancy for Synthetic Turf is 8 to 10 years.
INSTALLATION COST OF SYNTHETIC TURF

• $880,000 (estimated) installation for one field
  • Base prep: $500,000
  • Materials (turf and infill etc.) ($4.75 per sq. ft.): $380,000
• Other cost considerations
  • Purchase new maintenance equipment; sweeper and groomer: $11,500 (estimated minimum)
INSTALLATION COST OF NATURAL TURF

• Field renovation for one field: $240,000 (estimated)
  • Field leveling and shaping
  • Irrigation and drainage adjustments
  • Laser level field surfacing
  • New turf installation
• Sand capping for high traffic: 45,000 (suggested)

<tr>
<td>• Recommended usage of grass: average 750 hours/year with rest required</td>
<td>• Turf can be utilized 3,000 hours/year with no rest required</td>
</tr>
</tbody>
</table>
SYNTHETIC TURF

ADVANTAGES

• Consistent year-round playing surface built to withstand extended-use without downtime for recovery
• Synthetic turf can be utilized around 3,000 hours/year with no rest required
• Can be used during and/or after rain or inclement weather conditions
• No mowing or trimming
• No field marking
• No chemical applications
SYNTHETIC TURF

DISADVANTAGES

• Synthetic turf surfaces can be 10-30 degrees hotter than natural turf
• Synthetic fields do not fix CO2 (carbon-dioxide) and release O2 (oxygen) as do natural grass fields
• Initial cost for new synthetic turf field infrastructure
• New specialized maintenance equipment required to maintain the synthetic turf
  • Synthetic turf sweeper (range: $7,500-$8,500)
  • Synthetic turf groomer (range: $4,000-$5,000)
• Turf and Infill systems need renovating every 8-10 years (range: $350,000-$380,000)
• Life expectancy typically 8-10 years
NATURAL GRASS

ADVANTAGES

• Cooler playing surface than synthetic fields
• Grass contributes to cooling the surrounding environment
• Grass assists to filter air and water pollutants
• Less injuries sustained on a properly maintained grass field
NATURAL GRASS

DISADVANTAGES

• Grass fields are not meant to be used more than 35 to 40 hours a week
• Not playable during and/or after rain or inclement weather conditions
• Not playable while dormant (November-February)
• Requires routine maintenance: mowing, field marking, irrigation and fertilization/herbicide application
• Natural turf fields need renovating every 5 years (range: $240,000-$285,000)

Synthetic Athletic Turf Fields
APPENDIX

• Installation Timeline for Synthetic Turf
• Synthetic Turf Installation Process Photos
INSTALLATION TIMELINE FOR A SYNTHETIC TURF FIELD

- Install construction entrance/track protection along with erosion and sediment control (2 days)
- Field excavation to subgrade (5 days)
- Install perimeter concrete (5 days)
- Install field textile fabric and field under drain system (5 days)
- Install free draining base stone and finish stone (7 days)
- Off-load turf rolls and place turf (2 days)
INSTALLATION TIMELINE FOR A SYNTHETIC TURF FIELD (cont.)

- Sew turf panels (7 days)
- Install field markings and decorative markings (7 days)
- Install infill (7 days)
- Remove construction entrance/clean-up (4 days)
- Test field (2 days)
