

## Business Jet Access (SIC 4581)

Business Jet Access is an aircraft storage and maintenance facility at Dallas Love Field.

The hangar drains are connected to one of two 550-gallon oil/water separators prior to discharge to the municipal sanitary sewer. The tarmac drains to a 3000-gal oil/water separator. Aircraft are occasionally washed inside the hangars by a sub-contractor called Leading Edge.

All hazardous materials are kept inside flammable cabinets located in the hangars. Used petroleum products are stored outside in a drum locker with secondary containment.

Two fiberglass reinforced steel storage tanks, each with a 12,000-gallon capacity are maintained on the premise and contain Jet A fuel. An additional 1,000-gallon UST contains AvGas. These tanks are inspected and cleaned annually. They are equipped with leak detection systems.

<b>Chemical Inventory</b>		
<i>Item</i>	<i>Quantity/Where stored</i>	<i>Comments</i>
Methyl Ethyl Ketone	65 Gal (13-5 Gal)/Hangars in Flammable Cabinet	
IPA (Alcohol)	25 Gal (5-5 Gal)/Hangars in Flammable Cabinet	
ZEP Dyna 680 Parts Cleaner	110 Gal (2-55Gal)/Hangars in Flammable Cabinet	
BP2380 Oil	24 Quarts/Hangar and Supply Room Flammable Cabinet	
Mobil Jet 254 Oil	24 Quarts/Supply Room Flammable Cabinet	
Royco 782 Hydraulic Fluid	12 Quarts/Supply Room Flammable Cabinet	
Royco 756 Hydraulic Fluid	24 Quarts/Supply Room Flammable Cabinet	
Skydrol 500B4 Hydraulic Fluid	24 Quarts/Supply Room Flammable Cabinet	
Jet A fuel	2 12,000-gal UST	
AvGas	1 1,000-gal UST
