## Areas in Dallas to be sprayed for Mosquito Abundance

**Dallas** – Weather permitting; the area(s) delineated below are scheduled for mosquito control spraying between 9:00 p.m. and 5:00 a.m. Thursday, June 18, 2015 and Friday, June 19, 2015 due to mosquito abundance or high trap counts. Mosquito control spraying will not occur during rain or if the wind speed is 10 mph or greater. If these conditions exist spraying will be delayed until the next available night.

**Control Areas:** The areas to be sprayed are within an area generally bounded by:

3400 block of Pondrom Street: **Pennsylvania Avenue** on the north, **S Central Expressway** on the west, **Guaranty Street** on the east and **Dathe Street** on the south.

2900 block of Sundial Drive: **Northaven Road** on the north, **Indian Trail** on the west, **Channel Drive** on the east and **Townsend Drive** on the south.

8200 block of Marvel Drive: **Rayville Drive** on the north, **Buckner Blvd** on the west, **Teresa Lane** on the east and **Kipling Drive** on the south.

9900 block of Grady Lane: **Stebbins Drive** on the north, **St. Augustine Drive** on the west, **Masters Drive** on the east and **Seagoville Road** on the south.

While the insecticide is approved by the Environmental Protection Agency for treatment, residents in the above areas should avoid contact with the spray by staying indoors. Persons inside a vehicle while trucks are actively spraying should remain in their vehicles with the windows up and the air conditioner on until the trucks pass and the spray is no longer visible. Persons out during the scheduled spraying time should be alert for trucks and should not follow them. Residents who come in contact with the spray are advised to wash the affected area thoroughly with soap and water. The spray breaks down quickly in the presence of sunlight and has no residual effect.

### **Protection against mosquito bites**

Dallas residents are urged to take precautions against mosquito bites by reducing outdoor activity during evening and nighttime hours. Residents who are outside during these times should cover their arms and legs and use a mosquito repellent.

### **Prevent mosquito breeding**

Residents should eliminate standing water to prevent mosquito breeding and the spread of West Nile Virus. Breeding places for mosquitoes include swimming pools that are not kept clean, stagnant ponds, pet watering dishes, birdbaths, potted plants, old tires, empty containers, toys and clogged rain gutters and French drains. Standing water should be eliminated promptly, as mosquitoes can grow from egg to adult in as little as seven days.

To report standing water or mosquito problems Dallas residents should call 3-1-1. For additional information on Mosquito Control visit [www.dallascityhall.com](http://www.dallascityhall.com).
