

Muntin: A short bar used to separate glass in a sash into multiple lights. Also called a windowpane divider or a grille.

Mullion: The vertical or horizontal divisions or joints between single windows in a multiple window unit.

True divided light: A term that refers to windows in which multiple individual panes of glass or lights are assembled in the sash using muntins.

Simulated divided light: A method of constructing windows in which muntins are affixed to the **inside and outside** of a panel of insulating glass to simulate the look of true divided light.

Double glazing: Use of two panes of glass in a window to increase energy efficiency and provide other performance benefits.
